

GLOBALSTAR SERVICE COVERAGE

- Primary Globalstar Service Area
- Extended Globalstar Service Area
(Customers may occasionally experience lower signal availability)
- Fringe Globalstar Service Area
(Customers may experience intermittent signals)

NOTE: This map illustrates current service coverage available to Globalstar customers. Actual service availability may differ due to changes in gateway configuration, licensing and other factors. The areas covered by Globalstar service do not necessarily represent service availability for all Globalstar customers, as roaming capability at certain gateway areas may not be offered to customers from all other locations. Check with your local Globalstar service provider for current roaming availability.

Globalstar service is designed to be extremely reliable, and this map illustrates expected Globalstar coverage under normal conditions. However, Globalstar service is a satellite radio technology subject to transmission limitations and signal obstruction caused by customer equipment use as well as topographic and other variable conditions. These maps are not drawn to scale. This map is subject to frequent update, and is current as of 23 April 2003. This map supersedes any previous versions.

Please visit www.globalstar.com for monthly updated coverage map.
