

The newly-upgraded Iridium® network provides enhanced reliability
for existing products and services.

The newly-upgraded Iridium® network provides enhanced reliability for existing products and services.

Existing Iridium products are forward-compatible with the upgraded network, meaning they will continue to provide reliable communications for years to come.

The newly-upgraded Iridium® network provides enhanced reliability for existing products and services.

The new Iridium satellites have higher capacity than ever before, which provides more channels for all services. In areas of high congestion, this significantly reduces the risk of dropped calls.

The newly-upgraded Iridium® network provides enhanced reliability for existing products and services.

The upgraded network provides increased crosslink and feeder link capacity, which supports significantly higher traffic loads and improves call connectivity speeds.

The newly-upgraded Iridium® network provides enhanced reliability for existing products and services.

The upgraded network provides improved voice quality and minimizes slurring and distortion so your calling experience is better than ever.

The newly-upgraded Iridium® network provides enhanced reliability
for existing products and services.

Iridium continues to be the largest and only truly global satellite communications company with reliable coverage from pole to pole.

The newly-upgraded Iridium® network provides enhanced reliability for existing products and services.

The upgraded Iridium network provides new broadband capabilities debuting at 352 Kbps, with expected upgrades available up to 704 Kbps for various applications through Iridium CertusSM.
